Vamshidhar G

Salesforce Consultant

Contact: (571) 662-5196
Email: gvamshi1017@gmail.com

PROFESSIONAL SUMMARY:

Senior Salesforce Developer with 8+ years of experience delivering enterprise Salesforce solutions across Sales Cloud, Service Cloud, Experience Cloud, CPQ, and Data Cloud. Experienced in designing and developing scalable applications using Apex, Lightning Web Components (LWC), Salesforce Flow, and REST/SOAP integrations. Strong background in application architecture, system integrations, security, DevOps, and production support. Experienced working directly with business stakeholders, solution architects, QA teams, and product owners to deliver solutions that improve business processes while following Salesforce best practices. Experienced in leading technical design discussions, mentoring developers, implementing CI/CD practices and collaborating with cross-functional teams throughout the software development lifecycle.

TECHNICAL SKILLS:

Development	Apex, Apex Classes, Apex Triggers, Lightning Web Components (LWC), Aura Components, Visualforce, SOQL, SOSL, Dynamic SOQL, Batch Apex, Queueable Apex, Future Methods, Scheduled Apex, Platform Events, Change Data Capture, Custom Metadata Types, Custom Settings
Salesforce Clouds	Sales Cloud, Service Cloud, Experience Cloud, CPQ, Revenue Cloud, Data Cloud, Field Service
Integrations	REST APIs, SOAP APIs, Bulk API, Composite API, Named Credentials, OAuth, MuleSoft, Salesforce Connect, Platform Events, Azure Data Factory
Web Technologies	HTML, XML, JavaScript, CSS, J2EE
DevOps & Tools	Gearset, Copado, Flosum, Salesforce DX, CI/CD, Azure DevOps, Jira, Git, GitHub, VS Code, Data Loader, Workbench, Salesforce Inspector, Postman
Databases	Oracle, MySQL, Teradata, MS Access, DynamoDB, AWS RDS
Automation	Record-Triggered Flow, Screen Flow, Auto-launched Flow, Scheduled Flow, Approval Processes, Validation Rules, Assignment Rules, Escalation Rules
AI	Agentforce, Prompt Builder, Einstein for Developers, Einstein Copilot
Languages	SQL, R, Python, Apex

SALESFORCE CERTIFICATIONS:

- Salesforce Certified Administrator
- Salesforce Certified Platform App Builder
- Salesforce Certified Agentforce Specialist
- Salesforce Certified Platform Developer I
- Salesforce Certified Business Analyst
- Agentblazer – Innovator

PROFESSIONAL EXPERIENCE:

Ernst & Young – Mclean, VA — Sep 2022 – Present
Role: Salesforce Consultant

Responsibilities*:*

- Led the technical design and implementation of custom Sales Cloud solutions using Apex, Lightning Web Components (LWC), and Salesforce Flow to streamline opportunity management, proposal generation, marketing budgeting, and customer lifecycle processes.
- Designed and developed a custom Marketing Budget Management application using Lightning Web Components (LWC), Apex, Screen Flows, and Record-Triggered Flows that enabled marketing teams to create campaign budgets, distribute monthly revenue, manage billing schedules, track budget utilization, and automate budget approvals from a centralized workspace.
- Developed a custom Opportunity Management framework supporting Linear, Digital, and Marketing opportunity processes, allowing business users to create related opportunities, manage proposal workflows, automate record relationships, and synchronize opportunity status and revenue information using Apex trigger frameworks.
- Built Screen Flows, configurable validation frameworks, Custom Metadata Types, Validation Rules, and custom approval logic to automate opportunity creation, proposal generation, budget setup, funding validations, billing rules, Digital Proposal requirements, and Marketing opportunity approvals.
- Developed REST-based integrations between Salesforce, Airtable, and Appian using REST APIs, Named Credentials, OAuth, and reusable Apex integration services to synchronize marketing project data, campaign budgets, operational reporting, and downstream business processes.
- Developed Apex-based migration utilities and validation scripts supporting the migration of Accounts, Contacts, Opportunities, Campaigns, Campaign Members, Products, Contracts, and CPQ records from multiple legacy Salesforce organizations into a consolidated enterprise environment.
- Automated document generation, approval notifications, and downstream business processes using Salesforce Flow, Apex, Platform Events, Email Services, and Conga Composer while supporting enterprise deployments and production releases.
- Supported source-driven development and enterprise releases using Git, Gearset, Salesforce DX (SFDX), and Agile Scrum, while conducting code reviews, mentoring developers, troubleshooting production issues, and driving Salesforce platform modernization through Flow migration and reusable Apex architecture.

Enovational – Washington D.C
Sep 2021 – Sep 2022

Role: Salesforce Consultant

Responsibilities*:*

- Led the design and development of Apex services, Lightning Web Components (LWC), and Salesforce automation supporting case intake, contact investigations, exposure tracking, quarantine monitoring, and public health reporting.
- Designed reusable Apex frameworks and trigger handler patterns to support high-volume case processing while maintaining scalability, code quality, and governor limit compliance.
- Integrated the SmartyStreets API using REST services and Named Credentials to validate and standardize addresses for Contact and Intake records, significantly improving data accuracy for contact tracing operations.
- Designed and developed Lightning Web Components (LWC) for vaccination scheduling, appointment management, provider workflows, and real-time vaccination status tracking, improving usability for healthcare providers and administrative staff.
- Built Apex services, asynchronous processing, and Salesforce Flows to automate eligibility validation, appointment confirmation, vaccine inventory updates, and notification workflows across multiple vaccination sites.
- Implemented Conga Composer solutions to automatically generate vaccination records, consent forms, provider agreements, operational reports, and regulatory documentation, eliminating manual document preparation.
- Designed REST-based integrations between Salesforce and external healthcare systems to synchronize patient, provider, appointment and operational data while implementing centralized logging, exception handling, and retry mechanisms for reliable transaction processing.

Client: Caterpillar – Champaign, IL
Apr 2020 – Sep 2021

Role: Salesforce Developer

Responsibilities:

- Implementing Salesforce Sales Cloud for a nationwide sales organization by customizing Lead, Account, Contact, Opportunity, Product, Quote, and Campaign management processes.
- Developed custom Lead Management, Opportunity Management, and Account Planning functionality using Apex, Visualforce, Lightning Components and declarative Salesforce features.
- Developed REST API integrations between Salesforce and external customer management systems to synchronize account, contact, and order information.
- Built configurable approval processes for discounts and high-value opportunities, allowing sales managers to approve deals based on region, product line and revenue thresholds.
- Built reusable Apex integration services and error-handling frameworks to improve monitoring, logging, and recovery for failed API transactions.
- Implemented Batch Apex, Queueable Apex, and Scheduled Apex processes to handle high-volume equipment, warranty, dealer and customer records while maintaining bulk-processing and governor-limit best practices.
- Automated customer onboarding by implementing Screen Flows, validation rules, email alerts, and custom notifications, reducing manual processing and improving data consistency.
- Developed Batch Apex and scheduled jobs to process large data volumes received from external systems while maintaining governor limit compliance.
- Worked closely with integration teams to troubleshoot API failures, data synchronization issues, and authentication challenges using Named Credentials and OAuth.

Client: Avant- Chicago, IL **Mar 2019 – Apr 2020**
Role: Salesforce Developer

Responsibilities:

- Customized Sales Cloud applications for lead management, account management, opportunity tracking, and customer service operations using Apex and declarative Salesforce configuration.
- Developed Apex classes, Apex triggers, and Visualforce pages to support automated lead assignment, opportunity approvals, and customer onboarding workflows.
- Assisted in enhancing Service Cloud by configuring Case Management, Email-to-Case, queues, assignment rules, and dashboards that helped support teams manage customer requests more efficiently.
- Assisted in developing REST-based integrations between Salesforce and internal business applications to synchronize customer information and reduce manual data entry.
- Resolved production defects related to Apex, Visualforce, validation rules, and workflow automation while collaborating with QA teams and business users to ensure successful releases.
- Participated in Agile development activities including sprint planning, backlog refinement, code reviews, system testing, User Acceptance Testing (UAT), and production deployments.
- Enhanced Salesforce security by configuring Profiles, Permission Sets, Sharing Rules, Record Types, and Organization-Wide Defaults (OWD) based on business and compliance requirements.

Client: UBER – India **May 2016 – Jun 2018**
Role: Salesforce Developer

Responsibilities:

- Developed Salesforce applications for Uber India's driver onboarding, document verification, vehicle registration, partner activation, and support operations using Apex, Visualforce, SOQL, and JavaScript.
- Automated onboarding and approval processes using Apex triggers, Workflow Rules, Process Builder, validation rules, approval processes, and email notifications.
- Integrated Salesforce with internal driver and trip-management systems using REST and SOAP APIs to synchronize partner profiles, vehicles, onboarding statuses, and operational data.
- Customized Service Cloud to manage driver and rider support cases involving account activation, payments, trip disputes, and document verification.
- Configured case queues, assignment rules, escalation rules, and email-to-case to route support requests based on issue type, location, and priority.
- Developed Batch and Scheduled Apex jobs to process high-volume partner records and identify incomplete applications and expired compliance documents.
- Created reports and dashboards to track driver activation rates, onboarding progress, document verification, case volumes, and resolution times across Indian cities.
- Wrote Apex test classes covering positive, negative, and bulk-processing scenarios and maintained the code coverage required for production deployments.
- Built reports and dashboards to track driver application volume, onboarding completion, activation rates, pending document reviews, support-case volume, and case-resolution times across Indian cities.
- Collaborated with Uber India's operations, driver-support, product, QA, and integration teams to translate onboarding and support requirements into Salesforce solutions.
